Arduino PLC Demo Mode

The unit has a very nice built in demo that can easily be modified to show off your particular application. Most of the sounds and displays for the demo are contained on the SD card. You can create your own pictures/slides as .BMP files (320 X 240 pixels), and create your own .WAV files by recording them with Windows media player. You can insert your own slides and audio into the existing demo without changing the Arduino code at all, or make small changes to the file "demo.ino" in the folder Arduino\plduino_firmware (which contains the slide show that is presented).
